### About Me

Responsible and diligent software developer with front-end web development experience seeking new opportunities in a different field. Interned in a digital marketing agency and worked on multiple websites with WordPress and React. Have general skills for software development with Java and SQL. Self-taught the basics of Kotlin for mobile development to become a well-rounded developer. Assumes professional attitude required for workplace and capable of separating work and personal matters. Eager to improve and learn new skills, especially under great mentors.

the excellent interns

### Projects

#### Cart Off – The Immediate Baggage Drop-Off System

*Sept. 2019 – Mar. 2020*

As an online Baggage Tracking and Delivery Service, the project is developed for airlines. Users register online to access the tracking and delivery service for specific flights. Passenger's baggage are periodically tracked and their status are updated. Their status can be viewed through the website the user registered in.

- Technologies used: HTML, CSS, PHP, SQL, phpmyadmin, MySQL, and Java
- Attended weekly meetings with supervising professor in regards to the project's development
- Designed and developed the front-end development using HTML, CSS, and PHP
- Designed the project's database system (database tables and their relationships, ids, constraints etc.)
- Developed the database system of the project using SQL through phpmyadmin and MySQL
- Developed the software for tracking baggage using Java
- Documented the entire project using Word
- Submission for graduation project in Emirates Aviation University

#### Finger Mouse Pointer

*Feb. 2019 – June 2019*

A software program developed for moving the computer's mouse cursor using computer vision. Through both gesture and color recognition system, users can move the mouse cursor and execute the mouse click function. The device's camera will detect the user's hand.

- Technologies used: Java (Eclipse IDE)
- Researched the necessary tools and requirements of the software
- Co-designed and co-developed the software program using Java
- Documented the entire project using Word
- Submission for junior project in Emirates Aviation University
